Answer 1: Array Object

```html
<!DOCTYPE html>
<head >
<script>

var colours=new Array("red","blue","green","yellow");

var flavours=new Array("chocolate","lemon","orange","mint");

var mix;

document.write("a:" + colours.push("pink") +"<br><br>");

document.write("b:" + flavours.pop()  +"<br><br>");

document.write("c:" + flavours.shift() +"<br><br>");

document.write("d:" + colours.toString() +"<br><br>");

document.write("e:"  + colours.reverse() +"<br><br>");

document.write("f:" + flavours.length +"<br><br>");

document.write("g:" + flavours.unshift("strawberry") + "<br><br>");

document.write("h:" +(mix=colours.concat(flavours)) + "<br><br>");

document.write("i:" +(mix.join("*")) +"<br><br>");
</script>
</head>
<body></body>
<html>
```
