

Exercise 1: Date Object

1. Open Notepad and type the following :

```
<!DOCTYPE html>
<head >
<script>

document.write("The date is:" +      ?      + "<br>");

document.write("The Month is:" +     ?     + "<br>");

document.write("The Year is:" +      ?      + "<br>");

document.write("New month is:" +     ?     + "<br>")
</script>
</head>
<body></body>
<html>
```

2. Create a new date object called today.

3. Inside the document.write() replace the ? with:

- a) Get the date
- b) Get the month
- c) Get the Full Year

4. Set the month to December and get the new month.

5. Save file as date.html
