

Exercise 2: Functions

1. Open Notepad and type the following:

```
<!DOCTYPE html>

<head >

<script>

function total()

{

var num1="62";
var num2="10.5";
var num3=4.5;

var total //code goes here;

alert(" The total is: " + total)
}

</script>
</head>

<body>

<form name="t" >

<input type="button" value="Total" onClick="total()" />

</form>

</body>
</html>
```

2. Find the value for total by adding num1+num2+num3

3. Save the file as functionParse.html
