

Exercise 4: Loops

In this exercise you have to decide where the code(s) should go.

1. Open Notepad and type the following

```
<!DOCTYPE html>
<head >

<script>

var num1=1;

var num2=12;

{
document.write ("num1*num2= "      );
document.write ("<br><br>");

num1++
}

</script>

</head>

<body></body>

<html>
```

2. Insert a *do* and a *while* loop stating: *num1 is less than and equal to num2*

3. Insert the correct code(s) inside the `document.write` , which will display the result of `num1 x num2` .

4. Save the document as `doLoop.html`
