

# Exercise 5: Loops

In this exercise you have to decide where the code(s) should go.

## 1. Open Notepad and type the following

```
<!DOCTYPE html>

<head >

<script>

var myColours

var colours = new Array("red","green","blue","yellow");

{

document.write(

)

}

</script>

</head>

<body></body>

<html>
```

2. Insert a *for in loop* using the variable `myColours` and the array `colours`.
3. Inside the `document.write ()` type the code(s) that will display the outcome of the *for in loop*.
4. Save the document as `forInLoop.html`
