

# Exercise 1: Objects

1. Open Notepad and type the following :

```
<!DOCTYPE html>
<head >
<script>

function Television(size,price)
{
this.size=size;
this.price=price;

//code for method sales goes here
}

function sales() {
return "welcome to our sales"}

// code to create object myTelevision goes here

document.write("Size: " +           ?           + "<br>")
document.write("Price:£" +          ?           + "<br>")
document.write("Method:" +          ?           + "<br>")

</script>
</head>
<body></body>
<html>
```

2. Create an object called myTelevision - values are: size=24  
price=325
3. Add the method sales() to the constructor
4. Inside the document.write(?) write the code(s) to display the  
size , price and the method sales
5. Save file as object.html
