

Exercise 2: Objects

1. Open Notepad and type the following :

```
<!DOCTYPE html>
<head >
<script>

// code to create an object literal goes here

/*create a method called area and
add it to the above object */

document.write("Colour: " +      + " <br>")
document.write("Length: " +      + " <br>")
document.write("Height: " +      + " <br>")
document.write("Area: " +      + " <br>")

</script>
</head>
<body></body>
<html>
```

2. Create an object literal called box with the following properties and values:
colour=green, length=8, height=12
3. Create a method called area that returns the area value for the box and add it to the object box
4. Inside the document.write(?) write the code(s) to display the colour, length, height and the method area
5. Save file as object2.html
