Exercise 1: Variables

1. Open Notepad and type the following :

```
<!DOCTYPE html>
<head >
<script>

// global variable

function buying()
{
//local variables

alert("The total cost of  the books is: £ " +

//total cost of the books);

}
</script>
</head>

<body>
<input type="button" value="Total" onclick="buying()"/>
</body>

<html>
```

2. Inside the <script></script> tags do the following:

    a) Insert a global variable called total

    b) Insert two local variables called price and qty - the value of price is 6 and qty is 8

    c) Inside the alert ( ) calculate the total cost of the books using the global variable total

3. Save file as var1.html
